Likewise, by reducing scale and iron buildup with softeners and filtration any cleaning is much easier, and requires fewer detergents. Culligan water conditioners are customized to treat any water source, including municipal and well water. Features of Commercial/Industrial Water Softeners: Progressive Flow - the GBE controller uses this feature in multiple tank systems to bring additional units online or take them off line based on flow rate, allowing for smaller system sizing. Á Á Aqua-SensorÁ©Á - automatically triggers the water softener regeneration cycle based on resin bed exhaustion. This can help save expenses by reducing salt and water usage. Á Á Brine Reclaim - when the GBE controller is paired with the Brine Reclaim system, huge gains in operating efficiencies are possible. You can reduce salt consumption by at least 25% by upgrading to the Culligan brine reclaim system. Á Á Remote Display - will allow you to monitor the status of your system from up to 200 ft. away. Á Á Telemetry - our optional modem and telemetry services allow your system to call in after each regeneration cycle, reporting on system status and operating parameters, and alert Culligan Virginia when your equipment needs attention. Á Á Culligan Top Mount Softener The Culligan Top Mount (CTM) Series softener models use the latest control valve technology to offer superior flow rates up to 104 gallons per minute and long-lasting performance for commercial and industrial applications. The top-mounted control minimizes the system's footprint and is constructed of a corrosion-resistant, heavy duty plastic tested in extreme operating conditions to service all types of problem water (high chloramines, heavy iron, etc.).
